IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Craig Lundell on December 9, 2009.

The application has been amended as follows:

Please amend the claims as follows:

1. A process to prepare a haze free base oil having a cloud point below 0° C and a kinematic viscosity at 100° C greater than 10 cSt comprising the following steps:
 - (a) hydroisomerizing a Fischer-Tropsch synthesis product, which has a weight ratio of compounds having at least 60 or more carbon atoms to compounds having at least 30 carbon atoms in the Fischer-Tropsch product of at least 0.2 and wherein at least 30 wt% of the compounds in the Fischer-Tropsch synthesis product have at least 30 carbon atoms;
 - (b) isolating one or more fuel products and a distillation residue;
 - (c) reducing the wax content of the residue by contacting the feed with a hydroisomerization catalyst under hydroisomerization conditions; and
 - (d) solvent dewaxing the product of step (c) to obtain a haze free base oil.
6. The process according to claim 1, wherein at least 50 wt% of compounds in the Fischer-Tropsch product have at least 30 carbon atoms.

7. The process according to claim 1, wherein the weight ratio of compounds having at least 60 or more carbon atoms to compounds having at least 30 carbon atoms in the Fischer-Tropsch product is at least 0.4.

13. A process to prepare a lubricant composition not containing a viscosity modifier additive by blending a low viscosity base oil with a haze free base oil having a cloud point below 0° C and a kinematic viscosity at 100° C greater than 10 cSt prepared by a process comprising:

(a) hydroisomerizing a Fischer-Tropsch synthesis product, which has a weight ratio of compounds having at least 60 or more carbon atoms to compounds having at least 30 carbon atoms in the Fischer-Tropsch product of at least 0.2 and wherein at least 30 wt% of the compounds in the Fischer-Tropsch synthesis product have at least 30 carbon atoms;

(b) isolating one or more fuel products and a distillation residue;

(c) reducing the wax content of the residue by contacting the feed with a hydroisomerization catalyst under hydroisomerization conditions; and

(d) solvent dewaxing the product of step (c) to obtain a haze free base oil.

Please cancel claims 5 and 17.

2. The following is an examiner's statement of reasons for allowance: The prior art does not appear to anticipate or render obvious the recited process steps with a Fischer-Tropsch (F-T) product having the recited weight ratio and composition. The prior Office actions asserted that the invention of the instant application would have been unpatentable over Boucher et al (EP 0471524 A1) in view of Hoek et al (WO 02/070628 A2 or, alternatively, US 6858127). Hoek et al was relied upon for composition of the F-T product. However, the F-T product of Hoek et al was the result of multiple hydrocracking/hydroisomerization reactions [see, e.g., the abstract] under similar reaction

conditions and catalysts to those in Boucher et al. It was asserted that it would have been obvious to use the product of Hoek et al in the process of Boucher et al because the reaction conditions are similar or overlap. However, there is no indication in Hoek et al that further processing of the product stream is needed or desired. Therefore, it would not have been obvious to one of ordinary skill in the art to use the product of Hoek et al as the feed to the process of Boucher et al. The next nearest prior art reference is Germaine (WO 02/070629 or, alternatively, either US 2004/0045868 or US 7285206 B2), which discloses a process to prepare a lubricating base oil and a gas oil by hydrocracking/hydroisomerizing a F-T product similar to the one in instant application followed by separation of base oil precursor fraction, which corresponds approximately to the distillation residue of the instant application, and a pour point reducing step, which is preferably catalytic dewaxing [column 6, lines 29-33 in '206], on the base oil precursor fraction. However, the process does not teach the solvent dewaxing step nor would it have been obvious to add such a step since the reference is directed to base oil stocks that are used with automotive engine oils requiring a kinematic viscosity at 100° C less than 10 cSt [column 8, line 48 to column 9, line 2; examples 1 & 2; tables 1 & 2 in '206].

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
